

Intersection Space

Intersection Space

- > **Intersection Space**—A framed divider system that allows you to create defined spaces within an environment; for isolation, small meetings, intimate presentations, brainstorming – or, to simply “thin” the density of benching stations in a particular area.
- > **Intersection Space** offers multiple aluminum profiles to create unique spaces of varying size and materials. Whether the standard Intersection Divider hardware and framework (1.5”) or its new larger scale sibling (2” x 3” or 3” x 3”), it can be configured to meet almost any requirement. And because it’s based on Intersection, integrating the great variety of existing materials along with many new and custom components is easy.
- > **Intersection Space** offers CPS porcelain steel markerboards, glass markerboards, decorative glass panels, or Acoustikor panels which are non-porous, anti-microbial or sanitizable materials
- > **Intersection Space** accommodates media integration, open cable designs, fabrics/felt, custom pattern aluminum/steel, or metal/wire mesh products. Even special lighting (by others).
- > **Intersection Space** is the ideal solution to create the spaces that assist in adherence to social distancing measures within an office environment.

Standard Frame Finishes:

Satin Anodized Aluminum; Black Powder Coat – (see Corona Group Specifying Tool Kit – Profiles Box).
